

CYNNAL

COSHH MATERIALS IN THE WORKSHOP

Safe storage and handling

CHEMICAL STORE CUPBOARD

- All chemicals/solvents and sprays used in Cynnal's workshop are stored in a locked cupboard in the storeroom.
- Datasheets on all the cupboard's contents are located in a container on the front of the cabinet.
- The cupboard contains the following items :
 - IPA Solvent
 - Compressed Air
 - Mitre-Fast
 - Araldite
 - Foam Cleaner
 - Silicone Heat Sink Grease
 - WD-40
 - Screen Wash
 - De-Icer
- The nature of the work undertaken in Cynnal's workshop is increasingly diagnostic and repair work involving chemicals is becoming rarer, this has led to a significant decrease in the variety and volume of hazardous chemicals stored in the COSHH cupboard.

USE OF CHEMICALS IN THE WORKSHOP

- Technicians request items and the cupboard is accessed by the workshop manager.
- The majority of the chemicals listed above are used infrequently, compressed air being the exception.
- All staff are encouraged to avoid contact with these chemicals wherever possible and where unavoidable are advised to follow the handling instructions in the relevant datasheets.
