

# It's elementary!

## Your mission

Each group should have researched a particular element from the Periodic Table. Now let's see how quickly your classmates can guess your element!

## The rules

- Each group (the 'questioners') must take it in turns to ask the 'responding group' (who have done their research!) a question about their element BUT the 'responders' are only allowed to answer YES or NO, so choose your questions carefully!
- Questioning groups are allowed to make a guess on the hidden element of the 'responders' at anytime during their turn at questioning, but they must say PERIODIC TABLE first to allow their guess to be accepted. 'Questioners' can opt not to make a guess during their turn if they wish.
- You can use your element cards to help identify the element if you wish.
- The winners are the 'questioners' who correctly identify the hidden element. Be sure to choose your questions carefully to get the maximum amount of information in the shortest time!

Good luck!
